

nepotism and political hiring on the federal level at a much more costly amount to all taxpayers.

Let's also look at the corporations who continue to gouge all of us with excessive prices. They have caused many to suffer while they have made excessive profits while our federal government does nothing. Why? My answer is because of the millions of dollars in campaign contributions, and free junkets.

There should be a special tax on excessive profits. Also, any company relocating outside the United States is taking advantage of slave labor wages and less environmental standards that is causing a tremendous health problem across this earth. They should be charged a special tax (anti- American workers tax) when bringing their products back to the United States to sell to the same people that cause them to lose their jobs.

What I'm trying to say is we as a nation have the greatest country in the world and everyone wants to invest and be part of it so we have to stop selling it off. We just have to start at the top beginning with the President of the United States down to the precinct committee persons in putting forth the most effective and efficient cost conscious government as possible. The Democratic & Republican parties on the national, state, and county level must put forth positive platforms to be reviewed by our voters and stop bipartisan bickering which to me is the saddest part of our government which in turn cost we the taxpayers millions of wasted tax dollars and makes us look incompetent to the rest of the world.

Our goals in my opinion are as follows:

1. Higher education: Must be made available to everyone to keep from outsourcing our quality skilled paying jobs to foreign countries.
2. Health Care: The current path that we are following will bankrupt us..
3. Drugs: Criminal Justice & Jails consume 70 to 80% of our property tax dollars.
4. Welfare: All abled-bodied recipients should work for aid, and then we would or could reduce the welfare rolls and return recipients to the employment rolls.
5. Terrorism: Must be eliminated to insure future generations, a quality of life as we have today, if not better.
6. Global: Trade Deficits. Must be addressed (not just talked about.)
In 2005 record deficit \$723,000,000,000.00 billion dollars.
7. Environment: Global Cooperation, pollution will destroy our earth atmosphere.
